Project Design Phase

Problem – Solution Fit Template

Date	25 September 2026
Team ID	SWTID-2026-3161
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	2 Marks

Problem – Solution Fit Template:

The Problem-Solution Fit simply means that you have found a problem with your customer and that the solution you have realized for it actually solves the customer's problem. It helps entrepreneurs, marketers and corporate innovators identify behavioral patterns and recognize what would work and why.

Purpose:

- Solve complex problems in a way that fits the state of your customers.
- Succeed faster and increase your solution adoption by tapping into existing mediums and channels of behavior.
- Sharpen your communication and marketing strategy with the right triggers and messaging.
- Increase touch-points with your company by finding the right problem-behavior fit and building trust by solving frequent annoyances, or urgent or costly problems.

Understand the existing situation in order to improve it for your target group.

Template:

1. CUSTOMER SEGMENT(S) [CS] ServiceNow platform administrators and application developers in organizations that store sensitive records (HR, Finance, Legal, Healthcare) on the platform.	**6. CUSTOMER CONSTRAINTS [CC]** Limited scripting expertise, concern over ACL script performance on large tables, and change-management approval needed before modifying security rules.	**5. AVAILABLE SOLUTIONS [AS]** Static role-based ACLs, Data Policies to hide fields, Business Rules to filter records, manual record-ownership checks, or third-party GRC add-ons.
2. JOBS-TO-BE-DONE / PROBLEMS [J&P] Restrict who can view or edit a record based on a dynamic field value (e.g., department, confidentiality level, status) rather than a fixed role.	**9. PROBLEM ROOT CAUSE [RC]** Out-of-the-box role-based ACLs can only check static roles, not the actual data inside a record, so they cannot evaluate field values at run time.	**7. BEHAVIOUR [BE]** Admins create many narrow roles per department/value and manually audit access lists, or ask developers for one-off custom workarounds.
3. TRIGGERS [TR] An audit/compliance finding, a data-exposure incident, or a new sensitive field added to an existing table that now needs restricted visibility.	**10. YOUR SOLUTION [SL]** Build a Script-Controlled ACL: an ACL record whose "Script" condition (via a GlideRecord/GlideSystem check) compares the record's field value against the requesting user's attributes at run time, granting or denying access without adding new static roles.	**8. CHANNELS of BEHAVIOUR [CH]** Online: System Security > Access Control (ACL) module, Now Learning, ServiceNow Community. Offline: IT security review meetings, internal documentation and training sessions.
4. EMOTIONS: BEFORE / AFTER [EM] Before: worried, exposed, anxious about failing an audit. After: confident, secure, and in control of who sees what.
