Solution Architecture

Date	25 September 2026
Team ID	SWTID-2026-3161
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	5 Marks

Solution Architecture Diagram:

Component Description Table

Component Name	Description / Role in Architecture	Technologies Used
Presentation Layer	Screens where users open the custom table list and record forms. Each user sees only the records the ACL allows.	ServiceNow Web UI, Lists, Forms
API Gateway	Receives every request (UI or REST) and sends it to the platform, where session and security checks apply.	ServiceNow Instance Web Server, REST Table API
Auth Service	Manages test users, groups and roles, and supports impersonation for testing access.	Users, Groups, Roles, Impersonate User
Core Logic (ACL Engine)	Evaluates the script-controlled ACL. The condition script reads the record field value and returns true or false to allow or deny access.	ACL (Script condition), server-side JavaScript, Glide APIs
Database	Stores the custom table records, users, roles and ACL rules.	ServiceNow Database (custom table, sys_security_acl)
