Project Design Phase-II
Data Flow Diagram & User Stories

Date	25 September 2026
Team ID	SWTID-2026-3161
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	4 Marks

Data Flow Diagrams

A Data Flow Diagram (DFD) is a visual representation of the information flows within a system. The diagram below shows how an access request enters the Script-Controlled ACL system, how the field-value condition is evaluated, and where data is read from or written to.

User Stories

The table below lists the user stories for the Script-Controlled ACL feature.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
Administrator	ACL rule configuration	USN-1	As an administrator, I can create an ACL rule that restricts access based on a specific field value.	Rule is saved and enforced on the next access attempt.	High	Sprint-1
		USN-2	As an administrator, I can edit or disable an existing ACL rule.	Updated rule takes effect immediately without redeployment.	Medium	Sprint-1
	Audit & monitoring	USN-3	As an administrator, I can view an audit log of granted and denied access attempts.	Log shows user, record, field value, decision, and timestamp.	High	Sprint-2

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance Criteria	Priority	Release
Customer (End user)	Record access	USN-4	As a user, I can request to read or edit a record so the system checks my authorization automatically.	Access is granted or denied based on field value within acceptable response time.	High	Sprint-1
		USN-5	As a user, I receive a clear message when my access request is denied.	Denial message explains the reason without exposing internal rule logic.	Medium	Sprint-2
	Notifications	USN-6	As a user, I am notified if my access is repeatedly denied so I know to contact an administrator.	Notification is sent after a configurable number of consecutive denials.	Low	Sprint-2
